Monitor educador, n. 148, November-December 2011, p. 10-21

Galais, Carol. ¿Cada vez más apáticos? El desinterés político juvenil en España en perspectiva comparada.

This article examines the claim that levels of political apathy among Spanish youths are alarming in relation to European youths and it tries to determine whether the degree of interest in politics of Spanish youths has worsened in recent times. With this in mind, it compares the differences between Spanish and European youths and the rest of the population and with young people in Spain from previous periods. Finally, the supposed progressive depoliticization of young people is studied through a multivariate analysis. The conclusion is that young people today only display significantly lower levels of political interest when compared with young people from the 1980s, a group considered as an exception.
