

## 'Youth Indicators 2019. Overview of Basque Youth'

In 2007, the Basque Youth Observatory launched the biennial collection entitled Basque Youth Overview (Panorámica de la Juventud de Euskadi). The 2019 edition is the eighth report in this collection, which is also an Official Statistic of the Basque Statistics Plan.

This research contains information on 112 indicators, divided into 7 sections:

1. Demography and Population
2. Education
3. Employment and Economic Situation
4. Emancipation and Housing
5. Health
6. Leisure, Culture and Sports
7. Values and Attitudes

The information collected through these 112 indicators comes from primary sources, i.e. from research carried out by the Basque Youth Observatory, mainly from the Basque Youth Series, and from secondary sources (EUSTAT, Basque Government Departments, etc.).

All the indicators in this research offer information disaggregated by the sex of the persons interviewed. To the extent that the sample offers statistically reliable data, information is also provided on the three provinces of the Basque Country.

Some of the indicators, primarily those related to demography, education, employment and emancipation, provide comparative information on the Autonomous Communities of Spain and the 28 member states of the European Union.
