Compilation of links, guides, novels, cyber-dictionaries collected from different sources

Ciberdiccionario: **Conceptos de ciberseguridad en lenguaje #Entendible**

Compilation of Cybersecurity concepts explained in plain language, assuming that the reader has basic or even no technical knowledge.

¡Ciber-conciénciate!: **Ni sabemos toda la verdad ni somos conscientes del verdadero peligro que nos acecha**

This cybersecurity book offers advice and recommendations, applicable to the professional, personal and family environment, that help us to establish cybersecurity awareness in our lives. In addition, it guides us to protect our children around the guidelines for safe and responsible use of technologies and behavior on the network, as well as raising awareness of the need for proper privacy management.

GuíaBurros Ciberseguridad: Consejos para tener vidas digitales más seguras (Guíburros)

Guide with tips to have safer digital lives, from the definition of cybersecurity, through the most common cyberthreats and how to detect them, to what is to come in this area.What do they want my data for? The most common types of cyber threats and how to detect them.
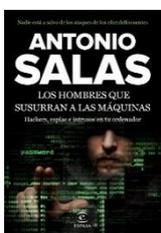

Ciberseguridad al alcance de todos: Guía práctica para evitar ser víctima del ciberdelincuente

This cybersecurity book explains cybersecurity in a simple language, understandable to anyone, with the objective of raising awareness and showing people how to increase their level of security and peace of mind when using any of their devices, whether they are surfing the Internet, using their email or buying an item online.

Guía práctica de Ciberseguridad

In the personal sphere, cybersecurity is part of our daily lives, even if we are not aware of it. The use of different services, such as email, social networks, our personal devices, etc., involves assuming certain risky behaviors of which if we are unaware of the threats could cause problems, such as identity theft, credential theft, device hijacking, etc. If we transfer this to a corporate or business environment, the consequences could be disastrous. Throughout this guide, the aim is to provide answers and information related to the existing risks and the measures to protect ourselves against them, not only from an awareness perspective, but also from a more operational and practical point of view.

Los hombres que susurraban a las máquinas (Antonio Salas)

Antonio Antonio Salas demonstrates in this recently published book that cybersecurity can be incorporated as a protagonist in a novelistic story. The author shows an extensive research on the dangers in the network with disturbing results.

It is best not to give too many clues and let yourself be carried away by the pages of this title that deals with cybersecurity in a less theoretical, more fun and entertaining way, especially for those people who either already know everything about it or those who find the theory too thick to digest with pleasure.

Ciberseguridad: consejos para tener vidas digitales más seguras (Mónica Valle)

This book is the most current and is written by a Spanish journalist who is an expert in cybersecurity. The most interesting thing about it, besides being very current, is its practical vision and its concept of a guide for average Internet users; that is, it is not necessarily a book for experts in the field, but any human being who usually surfs the Internet should spend a few hours reading it and apply what Monica recommends.
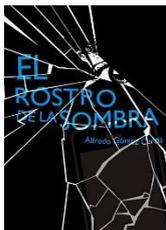

It is a cheap, simple but very effective and easy to read, so it is essential to have it in a home library where the Internet has a high presence, which is practically all Spanish homes.

El cisne negro. Nassim Nicholas Taleb

Finally, a different and special recommendation, The Black Swan by Nassim Nicholas Taleb. It is an essay that does not deal so obviously with cybersecurity, or at least not in such a monopolized way. However, it is a book that invites, among other things, to make a deep reflection on the extreme difficulty, not to say impossible, of safeguarding 100% of the data kept by companies.

It is a surprising read that will not only make you stop and think about cybersecurity, but also about other aspects that will probably get you to take a different look at what is going on around you.

El rostro de la sombra – Alfredo Gómez Cerdá

Book dedicated to what 90% of users do on a daily basis, uploading content to social networks. It shows how a simple image of a plate of food that you have uploaded to a social network ceases to be yours the moment you share it. Its vocabulary is somewhat more youthful with the intention of making teenagers aware of the horrible consequences of sharing things on the Internet.

Bajo el paraguas azul – Elena Martínez

Do you know how long it takes to ruin a person's life? In two seconds, the time it takes to share a photo on WhatsApp. You know, you've been given talks about cyberbullying, it would never happen to you, we are already with the usual stuff, aren't we? That's what Glauca thought. What could happen if she sent a picture to her boyfriend if they loved each other very much? What she didn't know was that her boyfriend would pass it on to Andrea. And Andrea, who hates her with all his heart, would share it with more people and upload it on the internet to make her a laughing stock. And on the internet, your life instantly ceases to be your own...

¡Atención Mamás Y Papás!

This manual on situations of use gives a quick and concrete answer to you: parents with children using mobile devices: Smartphones, Tablets and Wearables. It offers 60 cases on possible situations of use of mobile devices by children and adolescents, and analyzed on the three spaces where they live: the family, the street and the school or institute. Two experts in technological security and education in children's rights and ICT (Information and Communication Technologies) have analyzed in detail the different cases, including testimonies and solutions, and providing a double approach from the point of view of security and education, which are constantly present in the manual. It also includes various infographics on practical aspects of the use of mobile devices, such as two dictionaries: one on instant messaging and the other on emoticons to understand the language used by children and teenagers with their Smartphones, Tablets and Wearables.
